Assets and waste Management is said to be central and critical to Nigeria’s infrastructure delivery strategy for the next twenty-five years.

Chidi Umeano, principal consultant, Codub Consulting Ltd, a UK firm that works with key public organisations in the UK and Nigeria made this disclosure in a press statement.

Umeano noted that beyond the short term goals, the summit hopes to achieve some long term goals foremost of which is to develop a National Asset Management & Maintenance Policy, which he said is central and critical to Nigeria’s infrastructure delivery strategy for the next twenty-five years.

“This will ensure that the nation’s resources including any funds recovered from the corruption strategy by the government is invested in infrastructure restoration and upkeep”, he said.

Following the successes of previous summits in London, Abuja and Lagos, Codub Group in collaboration with UK Trade and Investment (UKTI), the Nigeria High Commission, London and Total Facilities Management Limited (TFML), will again be hosting the Asset and Waste Management Summit.

The summit on theme “Resource Efficiency: Asset to Waste...Waste to Wealth... A Sustainable Future”, is targeted at organisations both government and private and also individuals who are eager to improve on their understanding of asset & waste management.

The two-day summit will witness the gathering of over 200 professionals, senior stakeholders (local and international) within the Asset Management and Waste Management space who will discuss and proffer solutions to the on-going challenges facing lack of maintenance, rising waste issues and alternative sources of energy in Nigeria.
